Evaporator Kit:  Air conditioning, heating and defrost combination designed specifically for your vehicle. Your original control assembly or a vintage air replacement control is used for this system. Each system is designed to mount to existing holes in your dash and fire wall without drilling or fabrication. The evaporator kit comes complete with all mounting brackets, hardware, louvers, duct hose, wiring harness and installation instructions.

Gen IV technology offers separate heating and cooling coils which provide “just right temperature” air blending. There are no more cables, manual valves or capillary tube to hassle with.

Complete Kit: Comes with all of the above plus condenser, drier, compressor and compressor mounting bracket. The condenser attaches to existing radiator mounting holes. No drilling or fabrication required.
